

# Room-side Low-e Coating: As Good As It Sounds?

Alejandra Menchaca, PhD, LEED AP  
Senior Building Scientist | Associate

Lynn Petermann, AIA, LEED AP  
Architect

Vera Baranova, Assoc. AIA  
Designer

NESEA Building Energy Boston 2016  
March 10, 2016

**PAYETTE**

# LEARNING OBJECTIVES

1. Upon completion, participants will be able to identify the **modes of heat transfer** and how each has the ability to affect **thermal comfort**.
2. Upon completion, participants will be able to identify the factors that influence thermal comfort as defined by **ASHRAE 55**.
3. Upon completion, participants will understand how **emissivity** affects the radiant heat transfer process, the glazing **U-value**, and the impact on glazing unit technology.
4. Upon completion, participants will be able to evaluate different types of glazing units in terms of the **risk of radiant discomfort and/or downdraft**.

# ROOM-SIDE LOW-E COATING

Triple-Glazed IGU

Double-Glazed IGU  
with Room-side low-e

# ROOM-SIDE LOW-E

- *Room-side, 4<sup>th</sup> surface, Indoor surface low-e*
- $\epsilon \sim 0.2$  (compared to  $\epsilon \sim 0.05$  of cavity coatings)
- Scratch-resistant clear coating
- Lighter, cheaper
- Improved radiant occupant comfort

	Low-e surface	Transmittance		Reflectance			Winter U-value 1/2" Gap	
		Visible	Solar	Visible in	Visible out	SHGC	Argon	Air
Double pane	#2	62%	23%	12%	11%	0.23	0.24	0.29
	#2, #4	60%	22%	13%	12%	0.22	0.20	0.23
Triple pane	#2	51%	19%	14%	14%	0.21	0.18	0.21
	#2, #4	29%	10%	15%	16%	0.16	0.12	0.16
	#2, #6	45%	17%	20%	16%	0.20	0.15	0.18
	#2, #4, #6	29%	9%	16%	16%	0.15	0.11	0.13

ROOM-SIDE LOW-E: AS GOOD AS IT SOUNDS?

  - Convection
  - Conduction

# HEAT LOSS THROUGH GLASS

- Heat loss to the glass:
  - Radiation
  - Convection
  - Conduction

# HEAT LOSS THROUGH GLASS

- Heat loss to the glass:
  - Radiation
  - Convection
  - Conduction

# HEAT LOSS THROUGH GLASS | Radiation

- Radiative heat transfer between two surfaces depends on their:
  - Temperature
  - Area (view factor)
  - Emissivity ( $\epsilon$ )

Typical surfaces  $\epsilon \sim 0.9$

Room-side low-e coatings  $\epsilon \sim 0.2$

# HEAT LOSS THROUGH GLASS | Radiation

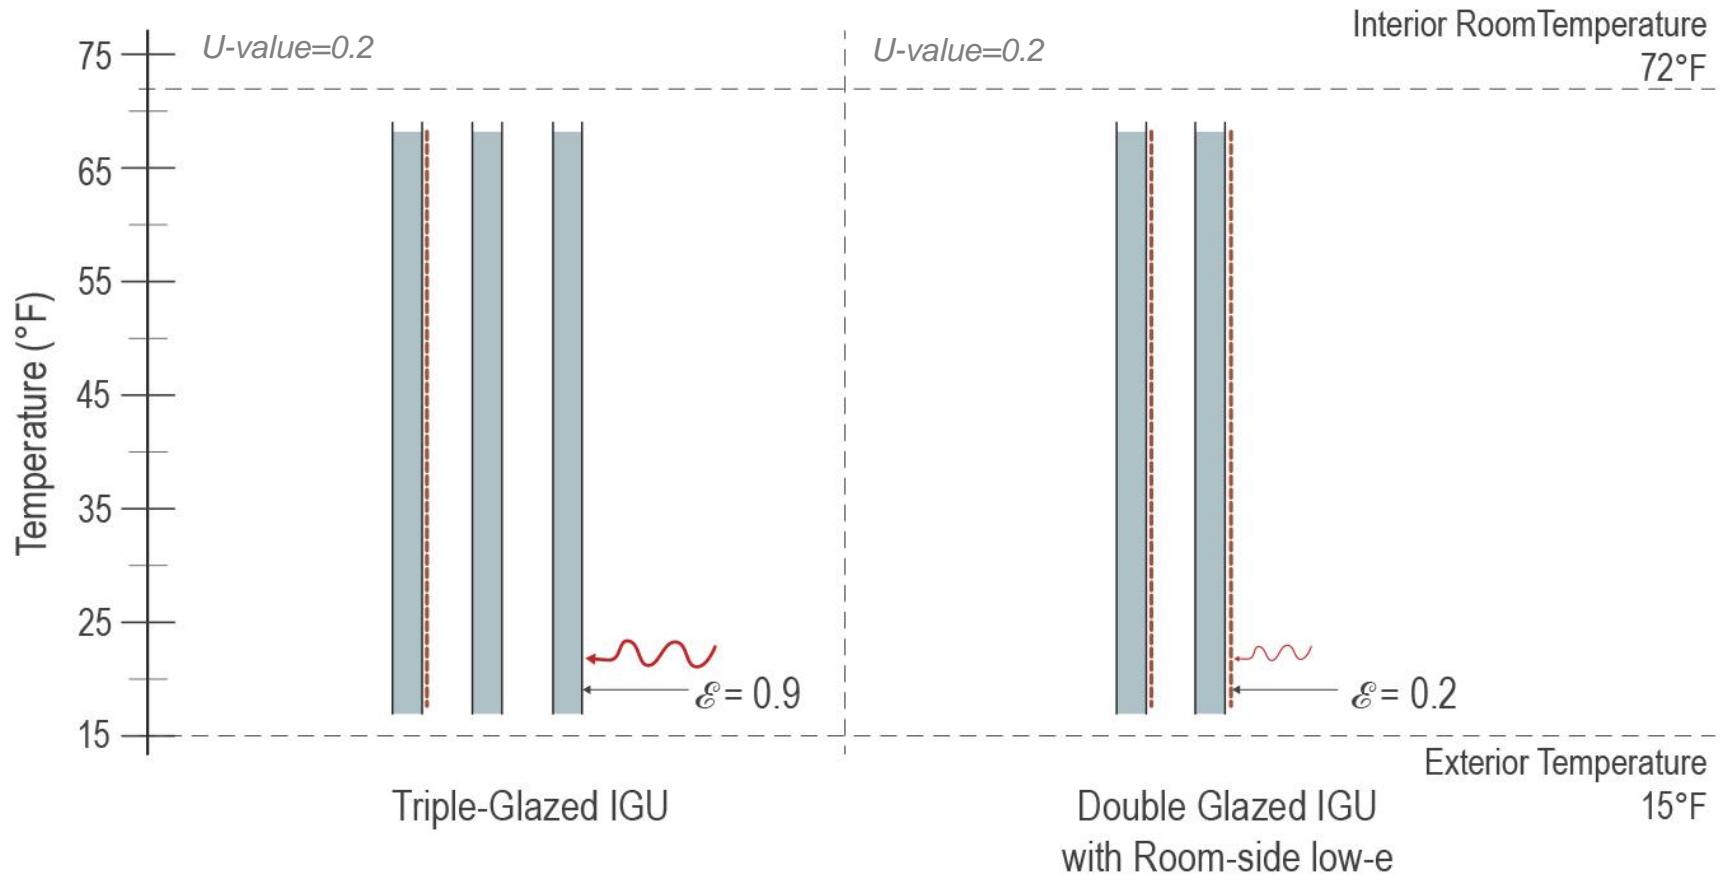

- Radiative heat transfer between two surfaces depends on their:
  - Temperature
  - Area (view factor)
  - Emissivity ( $\epsilon$ )

Typical surfaces  $\epsilon \sim 0.9$

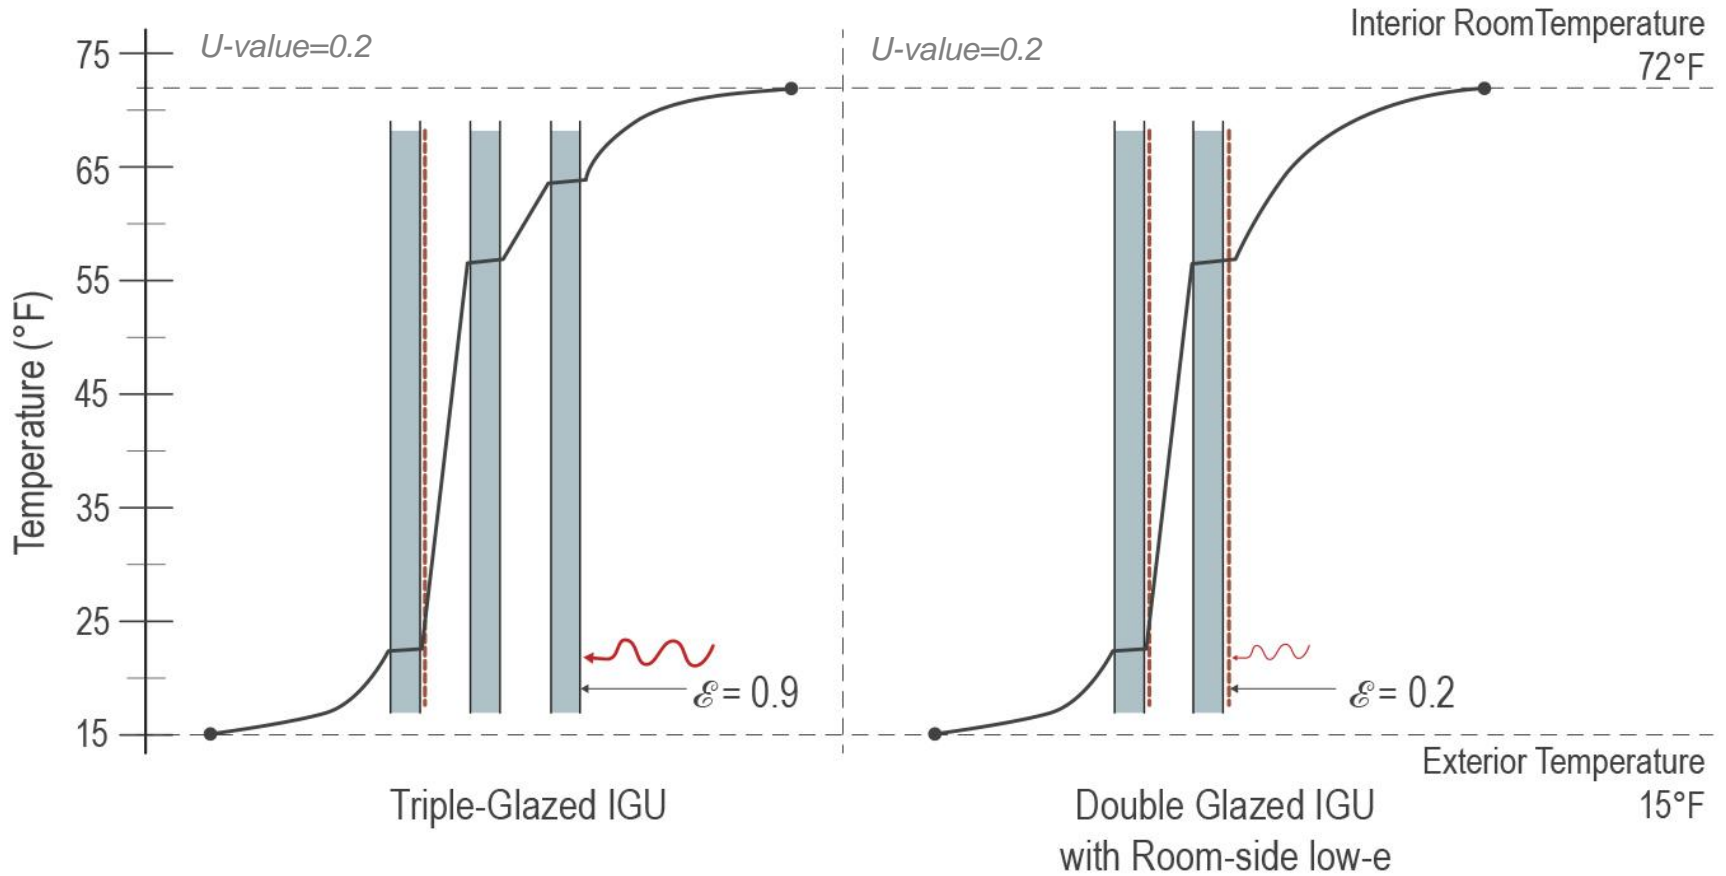

Room-side low-e coatings  $\epsilon \sim 0.2$

# ROOM-SIDE LOW-E | Interior Surface Temperature

# ROOM-SIDE LOW-E | Interior Surface Temperature

# ROOM-SIDE LOW-E | Interior Surface Temperature

# ROOM-SIDE LOW-E | Interior Surface Temperature

- Colder, stronger downdraft
- Potential for condensation

# AGENDA

Glazing Selection

Conclusions / Q&A

# THERMAL COMFORT

We feel cold when we lose heat:

- Radiation
- Convection
- Conduction

# THERMAL COMFORT

We feel cold when we lose heat:

- Radiation
- Convection
- Conduction

# THERMAL COMFORT

We feel cold when we lose heat:

- Radiation
- Convection
- Conduction

# THERMAL COMFORT

We feel cold when we lose heat:

- Radiation
- Convection
- Conduction

## THERMAL COMFORT | Glazing

Exterior glazing makes us feel cold:

- We lose heat to the glass

# THERMAL COMFORT | Glazing

Exterior glazing makes us feel cold:

- We lose heat to the glass
- We get cold hands and feet due to downdraft

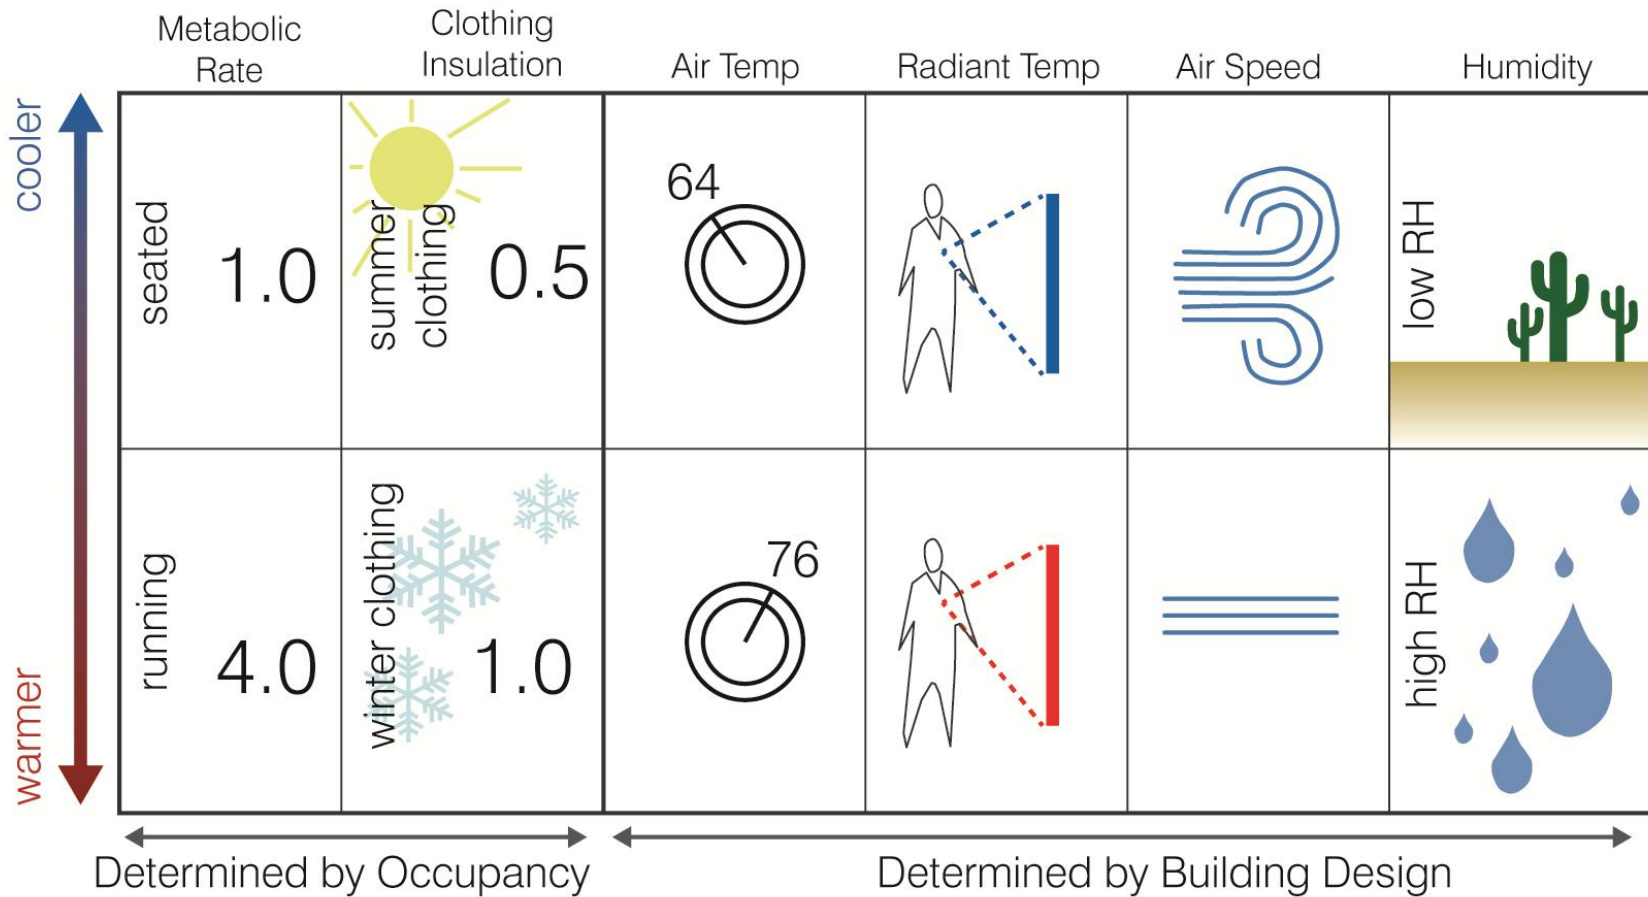

# THERMAL COMFORT | Predicted Percentage Dissatisfied

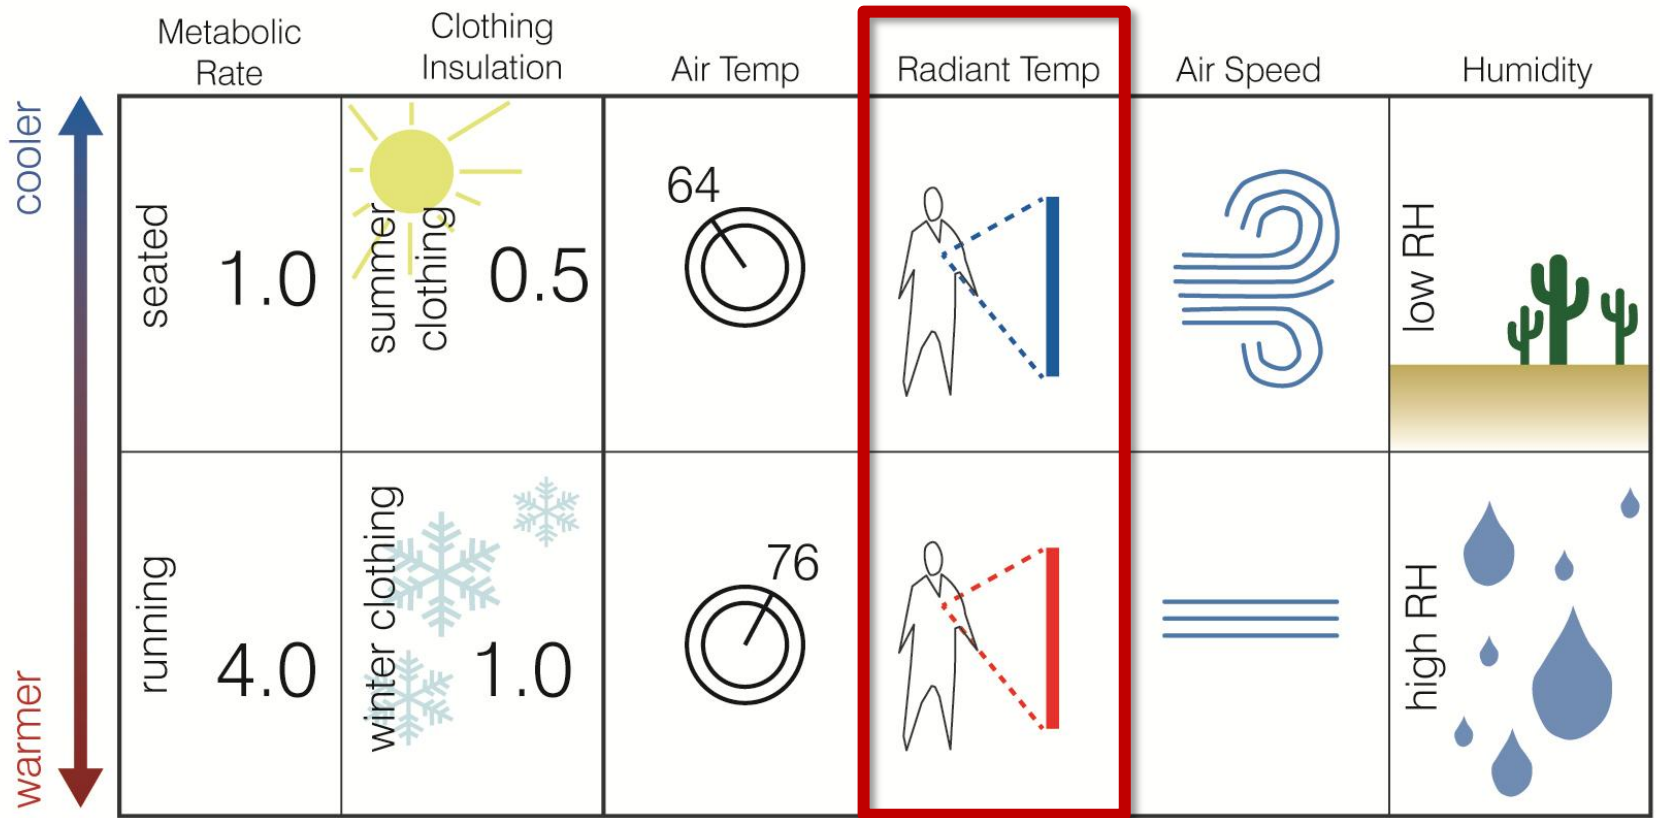

- Predicted Percentage Dissatisfied (PPD) less than 10%
- Predicted Mean Vote (PMV) Range -0.5 to +0.5

# THERMAL COMFORT | Quantifying Radiant Discomfort

# THERMAL COMFORT | Quantifying Radiant Discomfort

Determined by Occupancy

Determined by Building Design

Predicted Percentage Dissatisfied

# THERMAL COMFORT | Radiant Discomfort

- Radiant discomfort depends on:
  - How much “we see” of each cold surface (view factor)

# THERMAL COMFORT | Radiant Discomfort

- Radiant discomfort depends on:
  - How much “we see” of each cold surface (view factor)
  - How cold each surface is ( $T$ )
  - The emissivity ( $\epsilon$ ) of each surface

Glazing

Solid wall

Interior surroundings

# THERMAL COMFORT | Radiant Discomfort

- Radiant discomfort depends on:
  - How much “we see” of each cold surface (view factor)
  - How cold each surface is ( $T$ )
  - The emissivity ( $\epsilon$ ) of each surface

Glazing

Solid wall

Interior surroundings

# THERMAL COMFORT | Quantifying Draft Discomfort

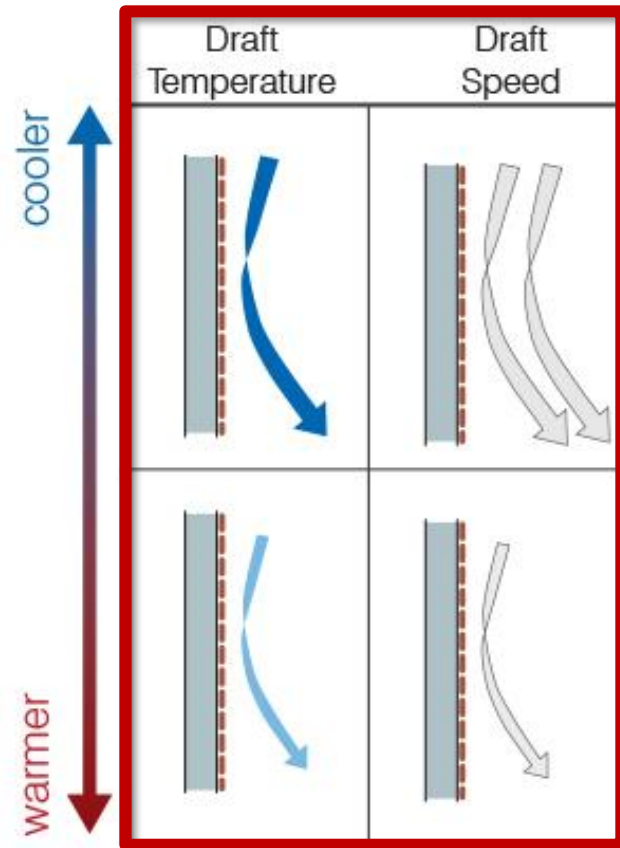

*Air Turbulence and Sensation of Draft.* P. O. Fanger (1988), *Energy and Buildings*, 12, pp. 21-39.

*Draught Risk From Cold Vertical Surfaces.* P. Heiselberg (1994), *Building and the Environment*, Vol. 29. No. 3, pp. 297-301.

# THERMAL COMFORT | Quantifying Draft Discomfort

Determined by Glazing

Predicted Percentage Dissatisfied

# THERMAL COMFORT | Draft Discomfort

- Draft discomfort depends on:
  - How cold each surface is
  - How tall the cold surface is
  - How close the occupant is to the surface

# THERMAL COMFORT | Draft Discomfort

- Draft discomfort depends on:
  - How cold each surface is
  - How tall the cold surface is
  - How close the occupant is to the surface

# THERMAL COMFORT | Draft Discomfort

- Draft discomfort depends on:
  - How cold each surface is
  - How tall the cold surface is
  - How close the occupant is to the surface

# THERMAL COMFORT | Key Differences

Triple-Glazed IGU

Double-Glazed IGU  
with Room-side low-e

- Radiant comfort: not affected (improved)
- Increased risk of downdraft (tall windows)
- Increased risk of condensation

# THERMAL COMFORT | Key Differences

Triple-Glazed IGU

- Use with tall windows
- Use in high humidity environments

Double-Glazed IGU  
with Room-side low-e

- Use with shorter windows
- Use with low winter humidity spaces

# AGENDA

Motivation

Physics of Room-side low-e

Comfort of Room-side low-e

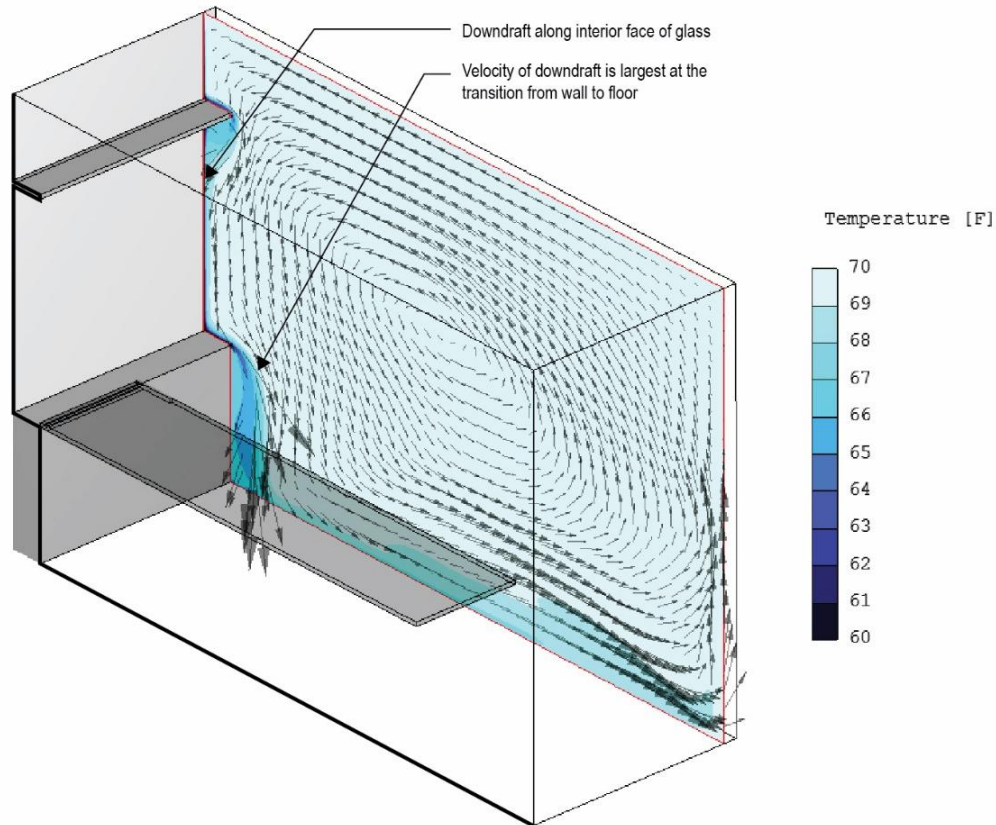

**Glazing Selection**

Conclusions / Q&A

# HOW TO SELECT THE RIGHT GLAZING?

## Goal:

- Minimize occupant discomfort
- Typically analyzed late in the design process through CFD analysis

# HOW TO SELECT THE RIGHT GLAZING?

 = downdraft discomfort

 = radiant discomfort

no →

 unlikely  
 unlikely

# HOW TO SELECT THE RIGHT GLAZING?

 = downdraft discomfort

**Conclusions / Q&A**

# CONCLUSIONS | Room-side Low-e, As Good as it Sounds?

It depends!

Double pane IGU with room-side low-e:

- ✓ Great thermal performance
  - ✓ Improved radiant thermal comfort
  - ✓ Lighter, cheaper than triple pane
  - ✗ Potential for downdraft discomfort with tall windows
  - ✗ Potential for condensation
- 
- Stay tuned for our new online glazing analysis tool coming soon!

More on condensation:

*Using 4th Surface Low-e Coating on Windows in a Cold Climate: Background, Observations and Practical Strategies.* White paper by Wright, J.L. (2012), University of Waterloo.
